Various Clamping Methods based on the shape of materials and sections.

Bundle cutting in general is a complex process, resulting in chipping of teeth while cutting.
The primary difficulties include moving of one element in the bundle during cutting,
improper clamping and wrong selection of TPI etc.
Following are the guidelines to clamp bundles.

Shape	Clamp method by bundle number				
	1 Piece	2 Piece	3 Piece	4 Piece	5 Piece
Round bar					
Hexagonal bar					
H-section steel					
Pipe					
Square pipe					
Groove shape steel					
Chevron steel					
C-section steel					
Rail
